# CATHODIC PROTECTION CABLE 

 HALAR / HMWPE
## DESCRIPTION \& FEATURES :

This specification describes a stranded single conductor sizes 8 AWG thru 1/0 AWG with a dual insulation construction. The inner layer or the primary insulation is composed of HALAR, a fluoropolymer material that has exceptional chemical resistance in the presents of chlorine, sulfuric acid, hydrochloric acid.The outer insulating layer is high molecular weight polyethylene (HMWPE) it exhibits superior dielectric and tensile strength and provides mechanical protection. And can withstand considerable abuse during installation.

## APPLICATION :

HALAR / HMWPE cables are used as deep anode lead wires where chlorine and hydrogen gases are generated. The cable can be directly installed in fresh, brackish, or salt waters.

## STANDARDS:

## CONDUCTOR.

Stranded bare or tinner copper conductor conforms to ASTM Spec B-3 and B-8 PRIMARY INSULATION.

A homogeneous .020 min wall of natural ECTFE fluoropolymer (Halar) shall be extruded around the conductor.

## JACKET.

A . 065 mil wall of high molecular weight polyethylene (HMWPE) shall be extruded around the primary insulation. the jacket conforms to ASTM Spec D 1248

For identification purpose the cable shall be surface printed with. " Manufacturer name Conductor size AWG, HALAR / HMWPE CATHODIC PROTECTION CABLE"
